# Esercizio (corso Analisi Matematica 1)

Data la funzione rappresentata in figura

disegnare:

1.  $F(x) = f(x) - 18$
2.  $F(x) = -f(x)$
3.  $F(x) = f(-x)$
4.  $F(x) = -f(-x)$
5.  $F(x) = f(x - 1)$
6.  $F(x) = f(x + 1)$
7.  $F(x) = f(1 - x)$
8.  $F(x) = |f(x)|$

# Donazione

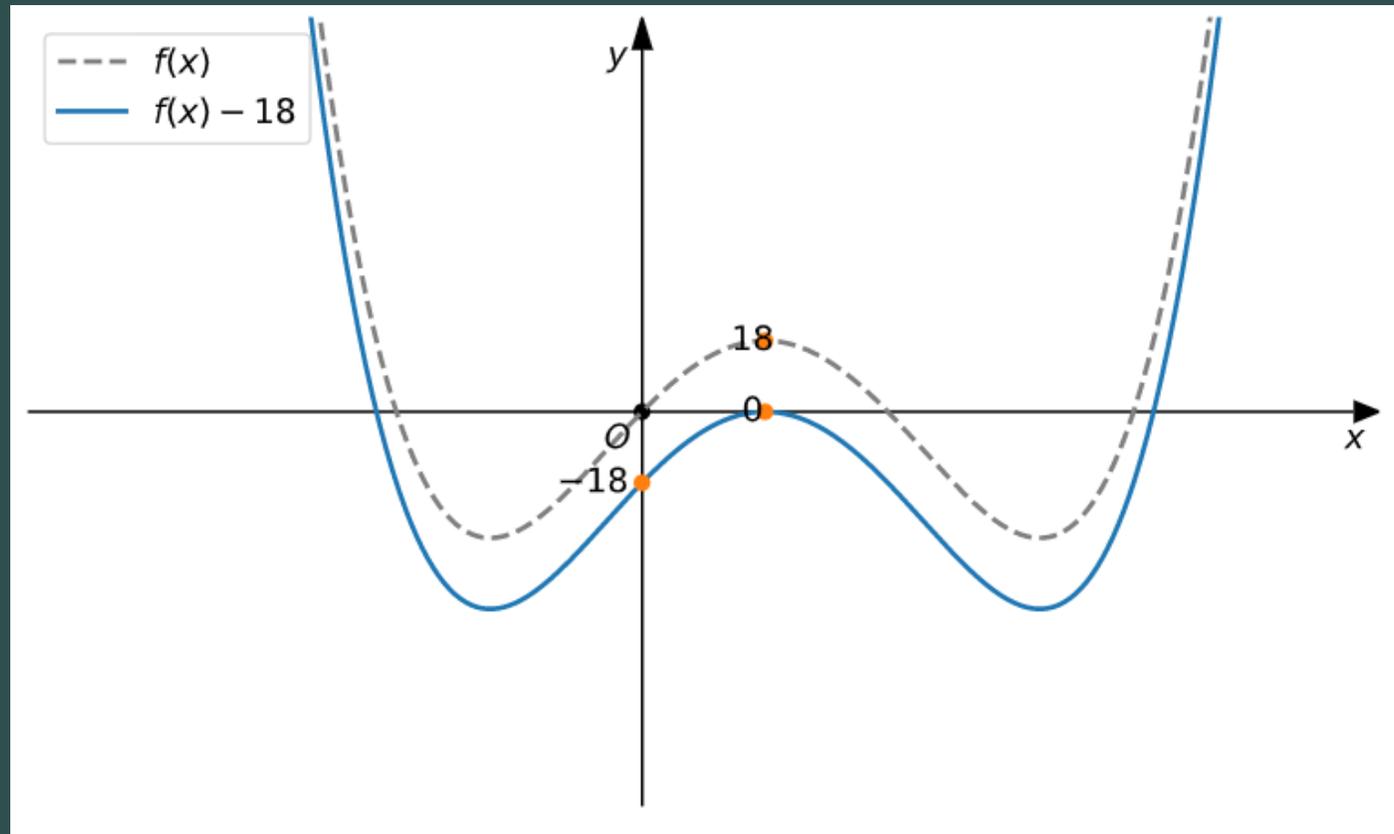

Se apprezzi le mie slide, considera di fare una donazione per supportare il mio lavoro.

Grazie!

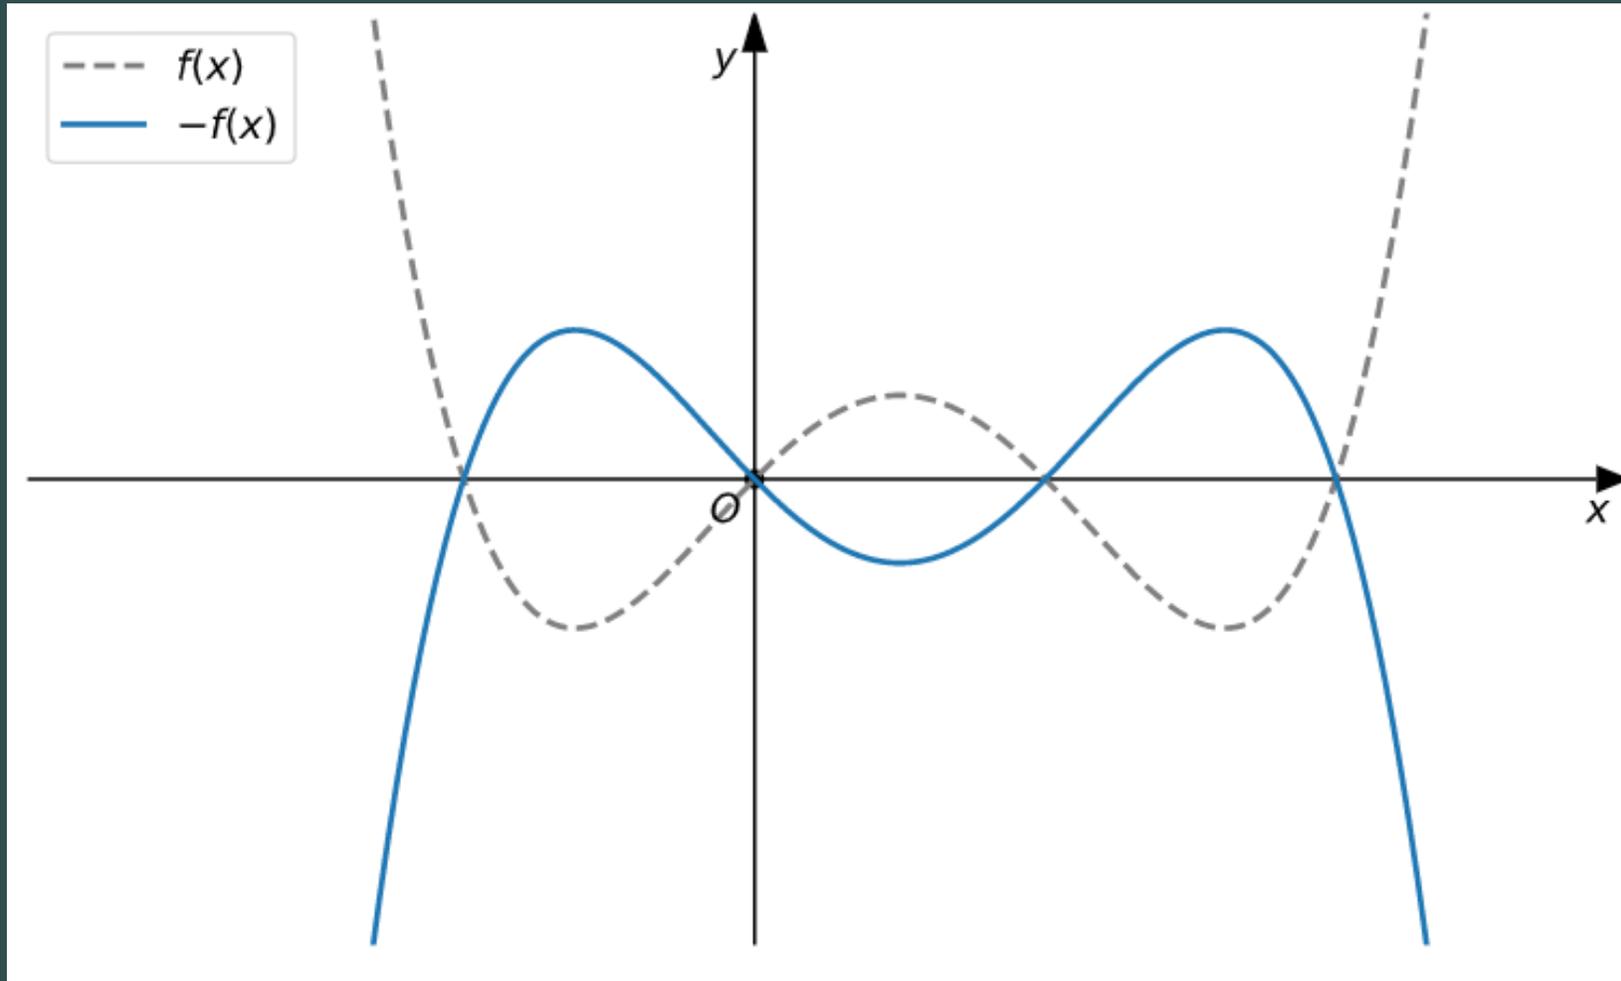

# Caso (traslazione lungo y):

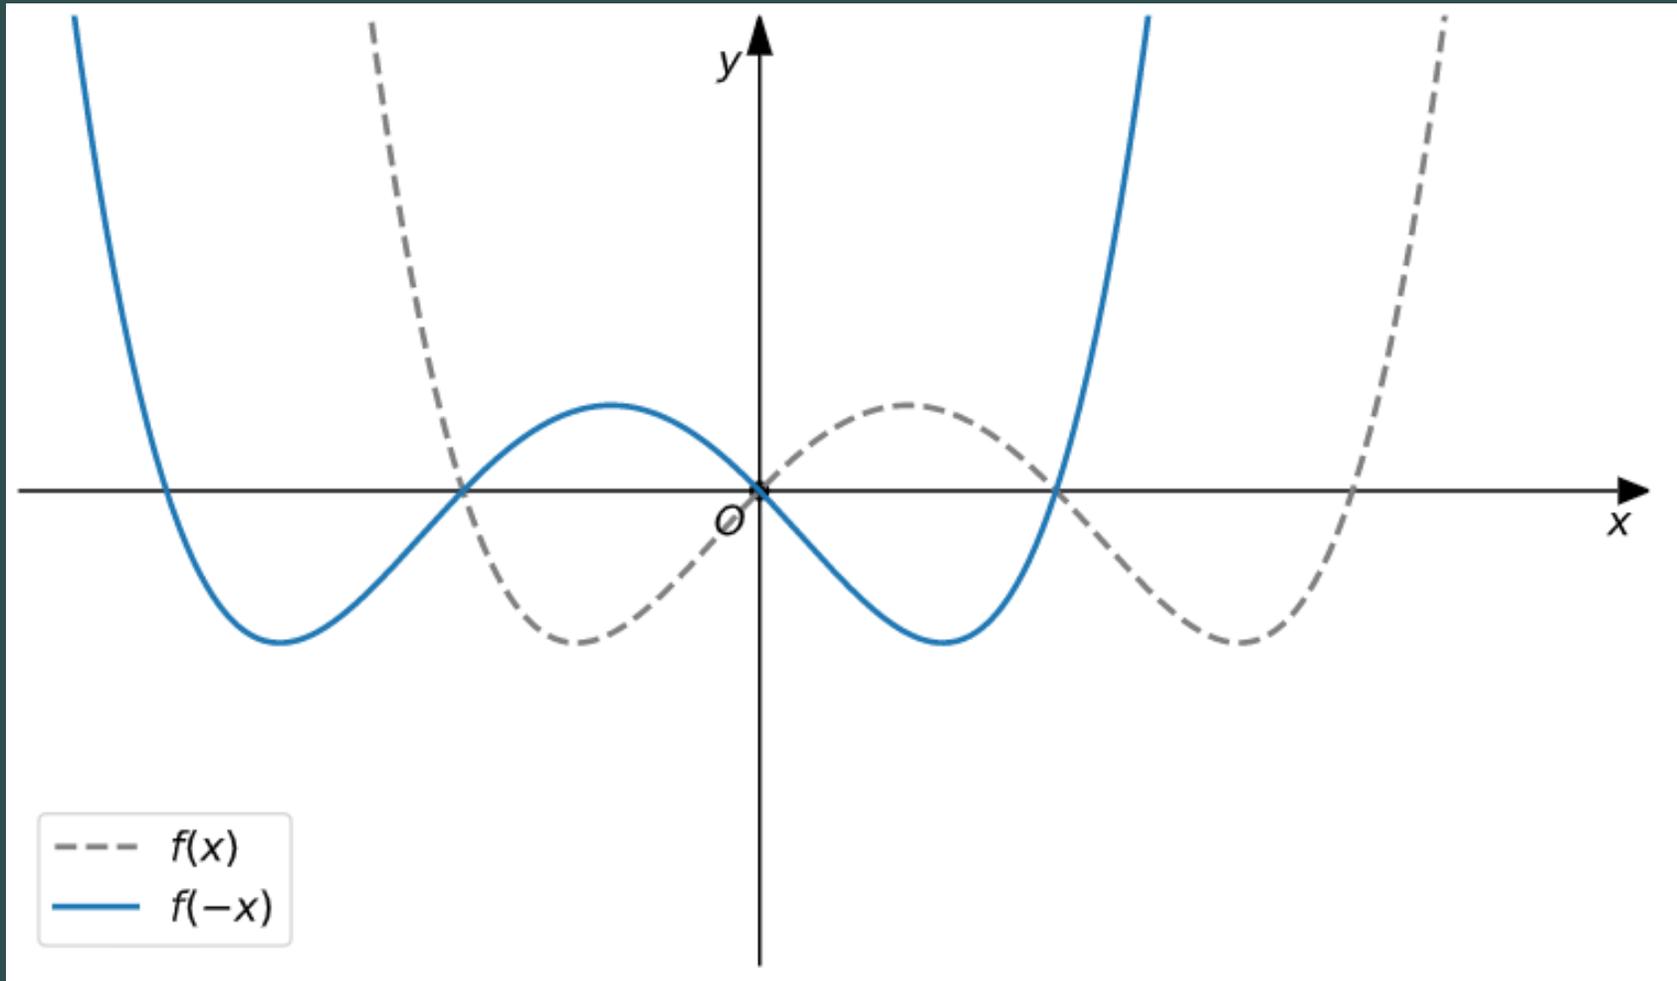

$$F(x) = f(x) - 18$$

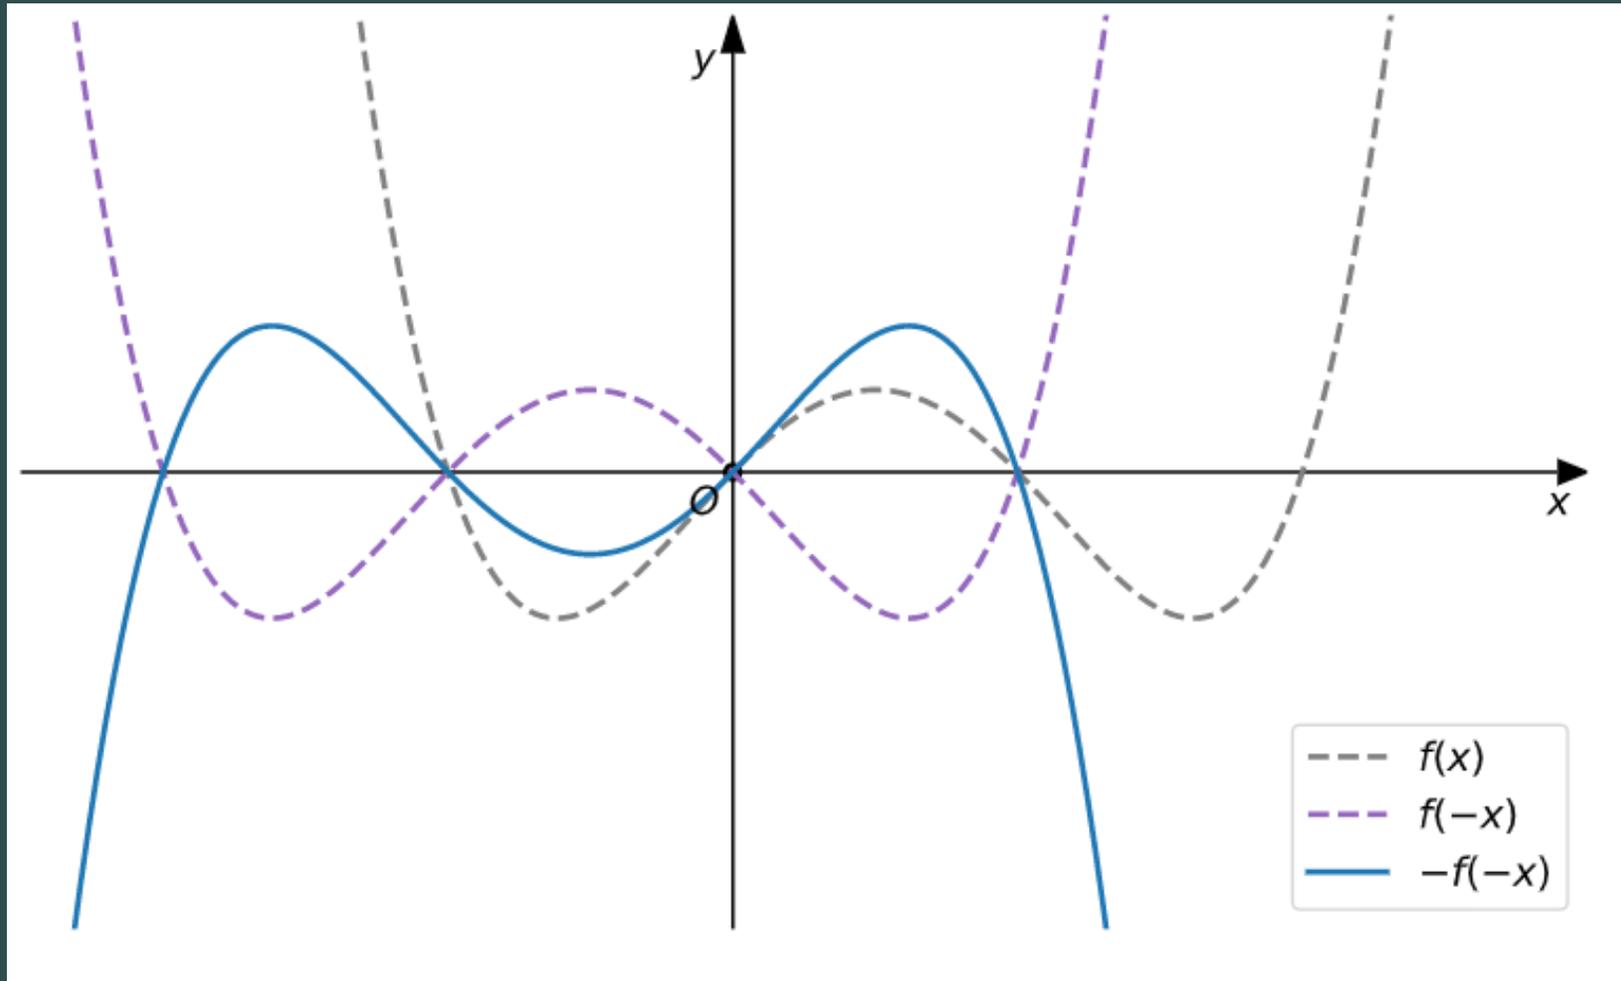

# Caso (opposto): $F(x) = -f(x)$

# Caso (parte pari): $F(x) = f(-x)$

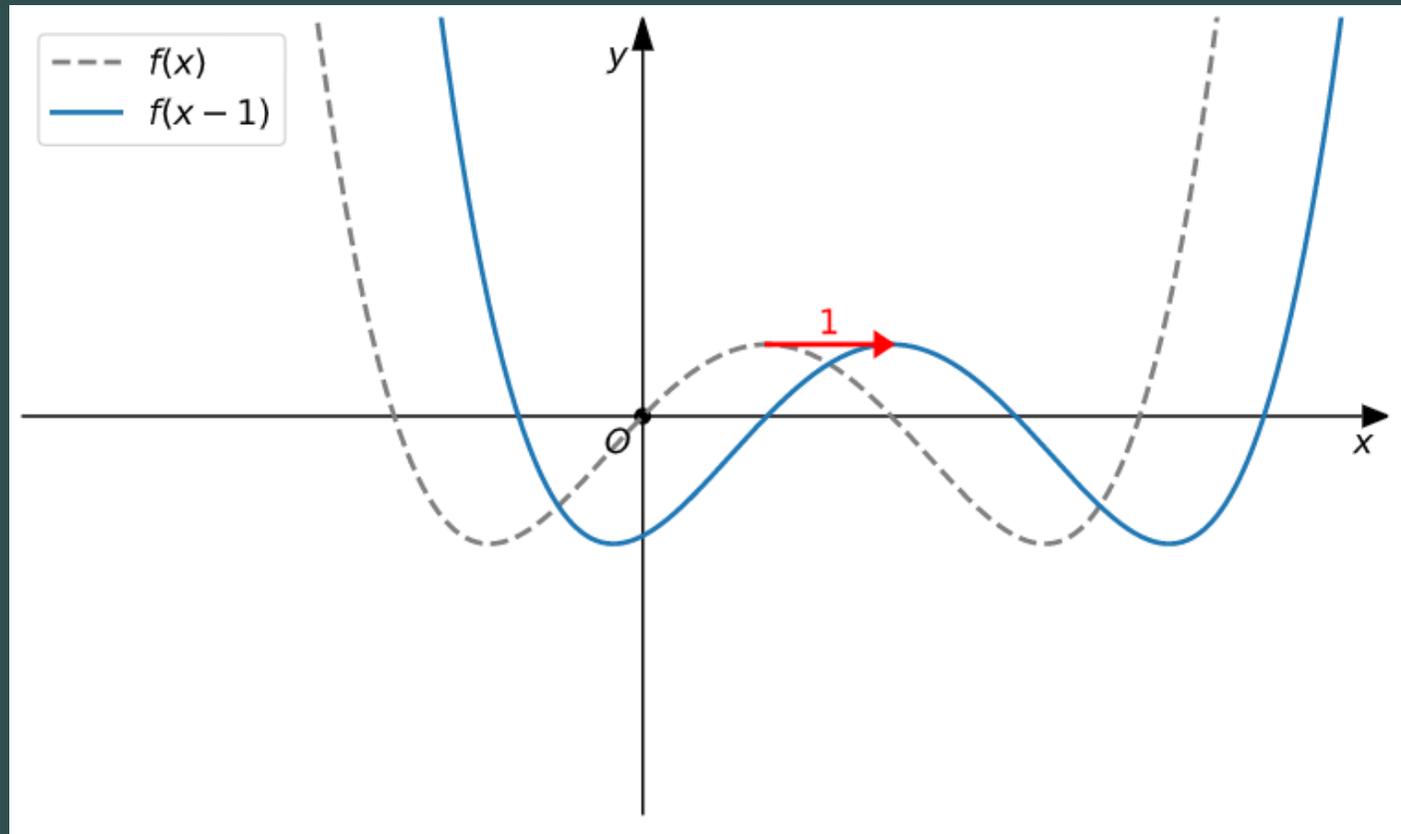

# Caso (parte dispari): $F(x) = -f(-x)$

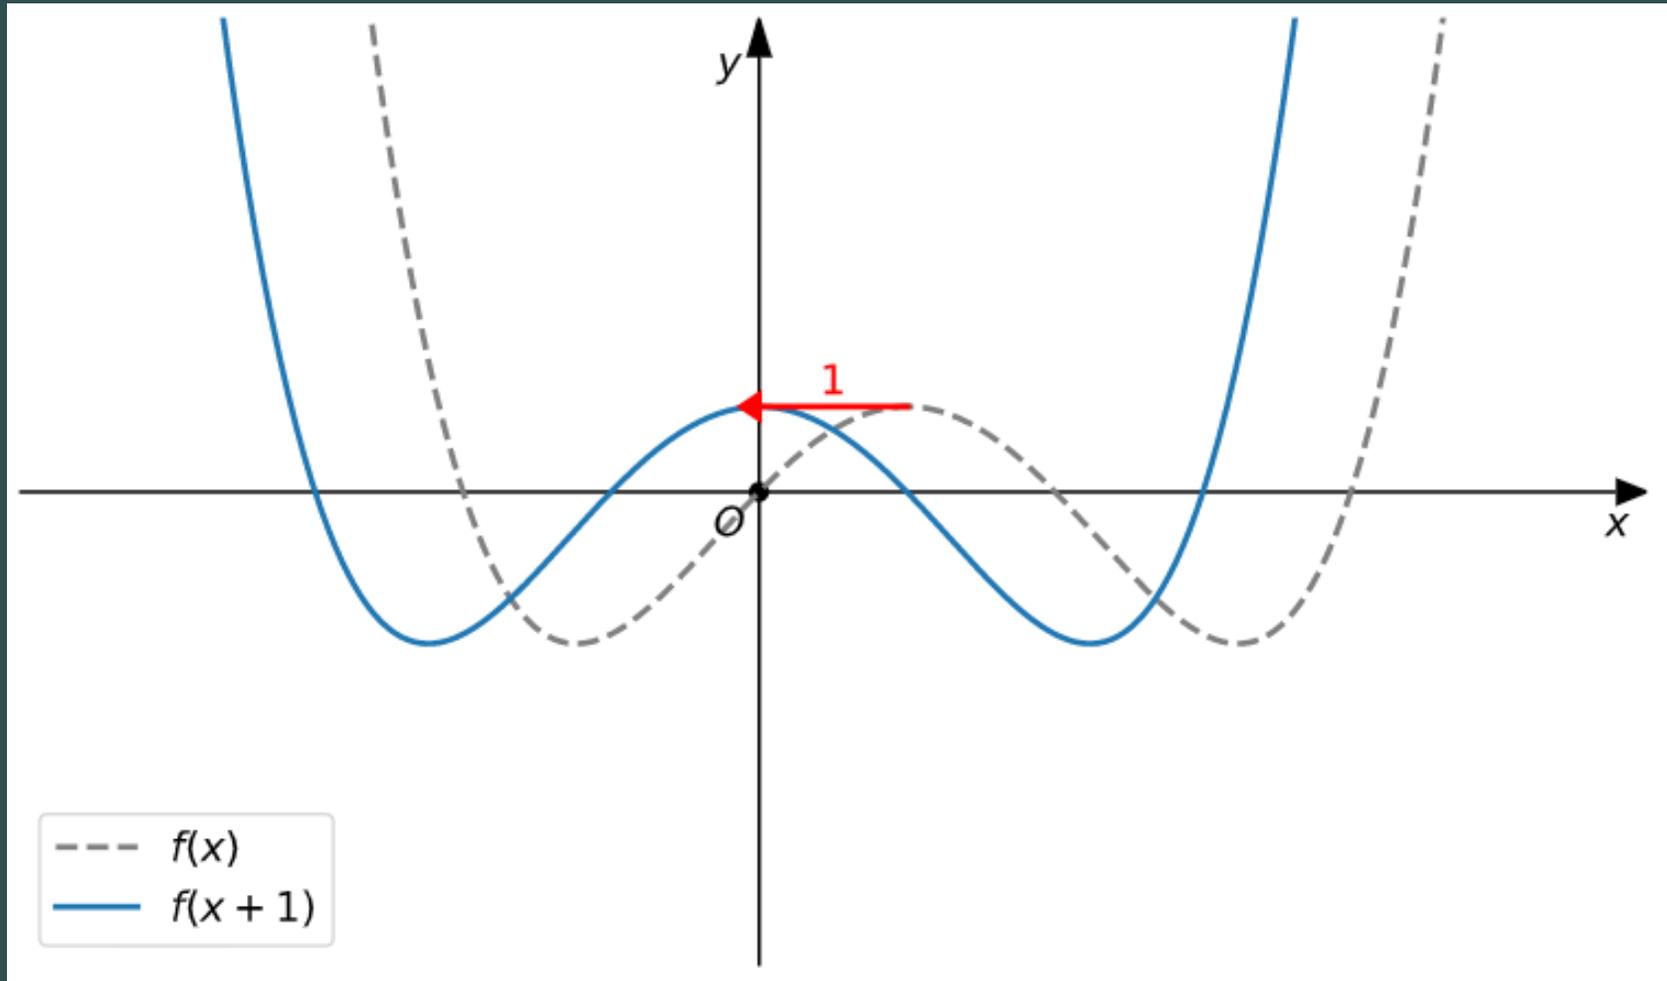

# Caso (traslazione lungo x):

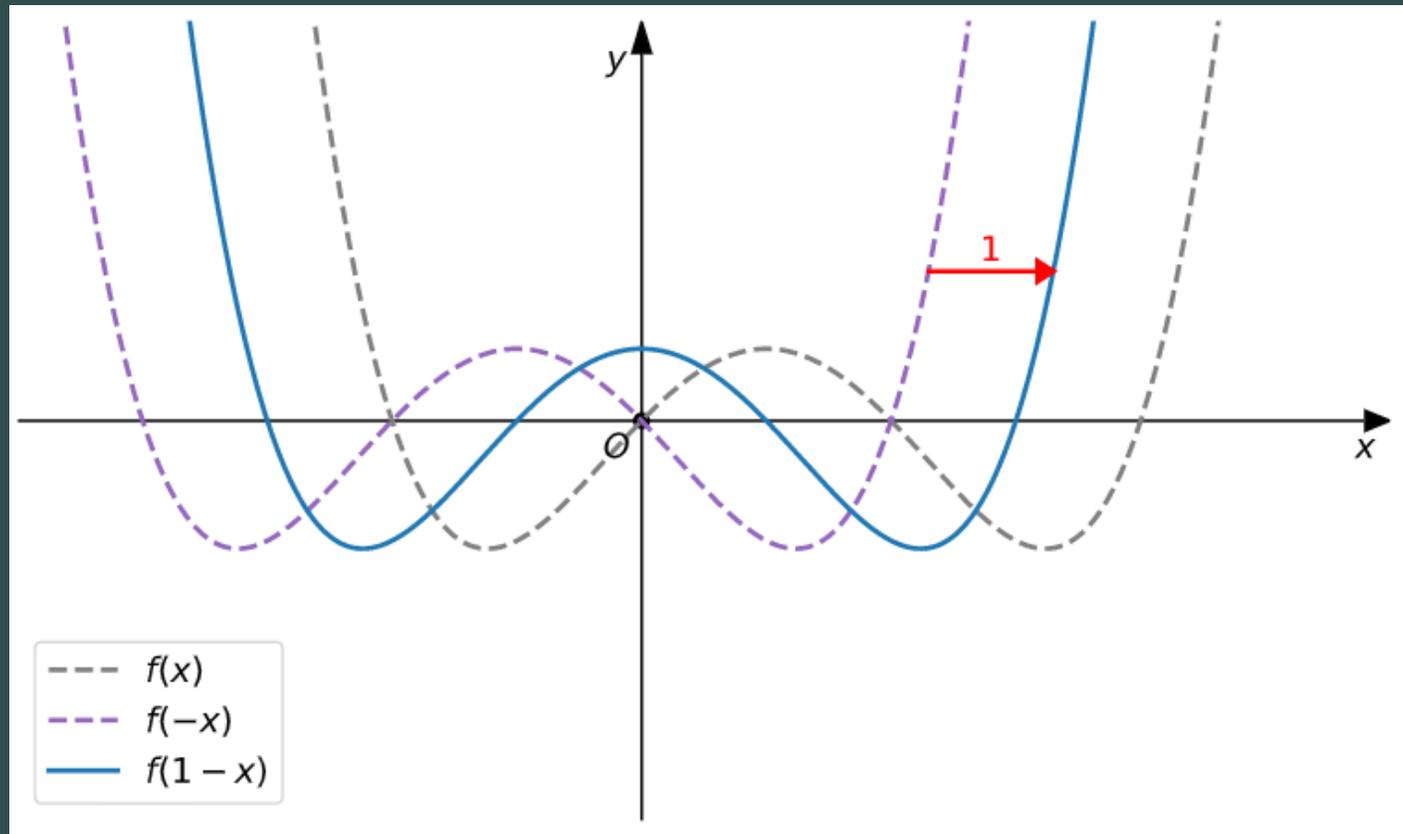

$$F(x) = f(x - 1)$$

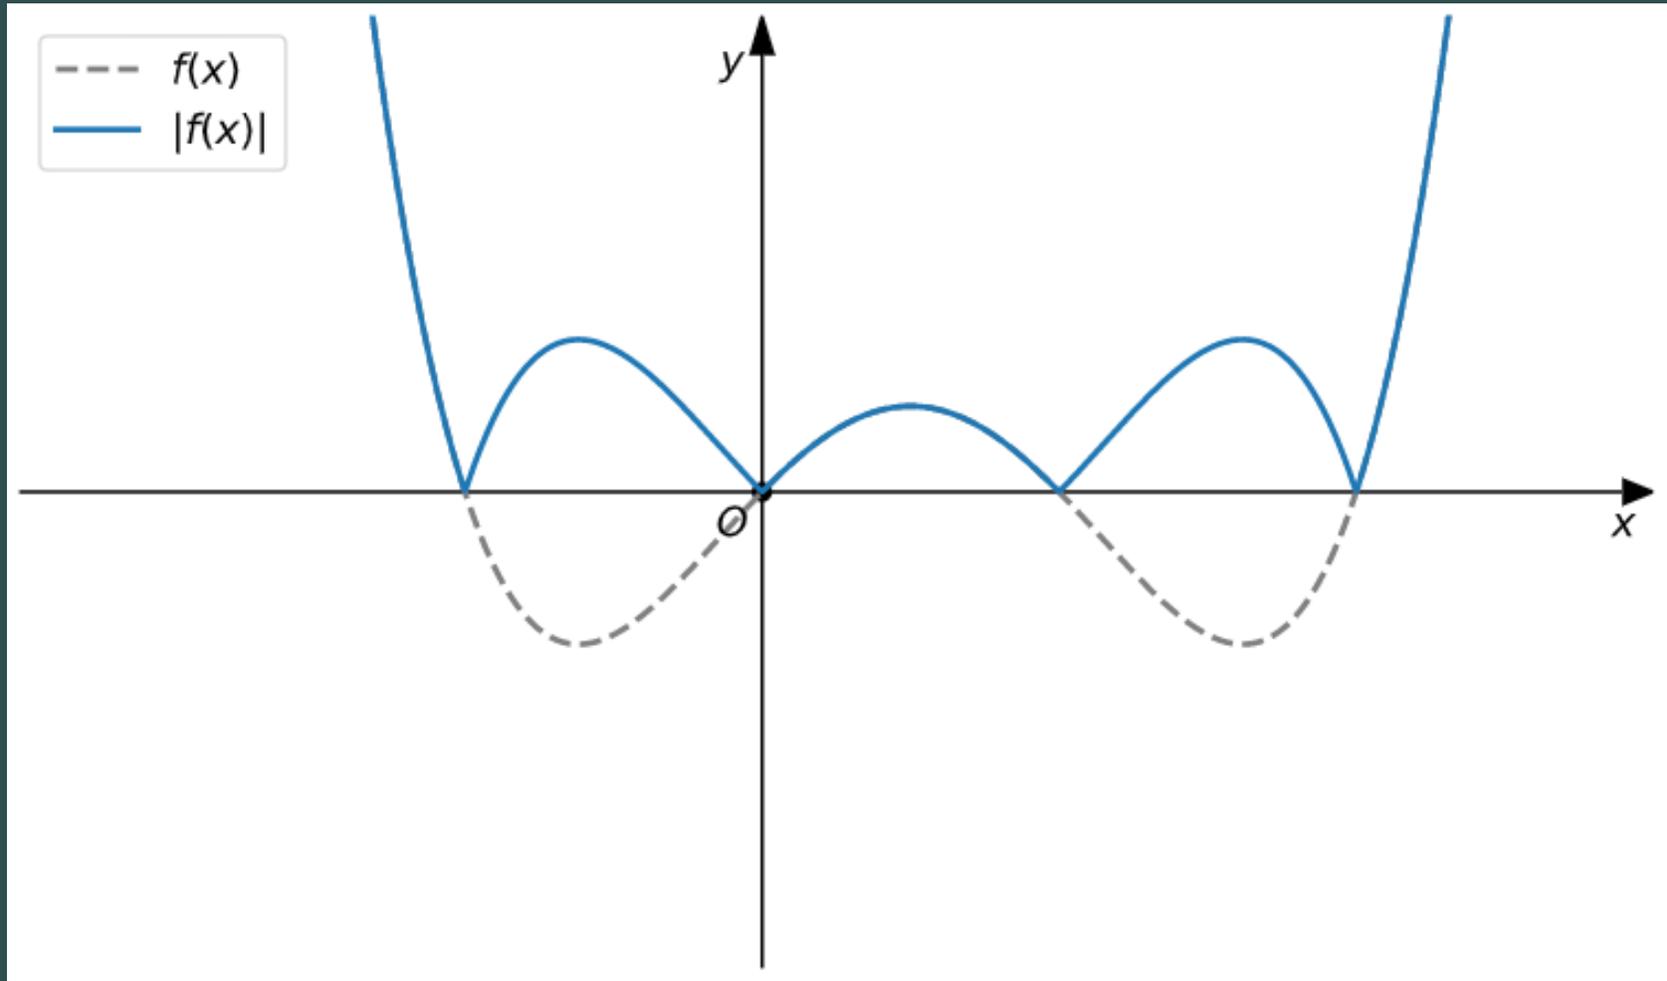

# Caso $F(x) = f(x + 1)$

# Caso (traslazione con ribaltamento lungo $x$ ): $F(x) = f(1 - x)$

# Caso (valore assoluto): $F(x) = |f(x)|$

FINE
